Technical Information

Features

Type:
Tuneable weighted diaphragmatic membrane

Recommended for:
Studios | Recording rooms

Tuneable absorption range: 57Hz to 82Hz.

.Tuneable weighted diaphragmatic membrane
.Hz-by-Hz fine tuning
.New fine-tuning possibilities.

Dimensions:
595x595x156mm

Dimensions:

FG | 595x595x156mm

New fine-tuning possibilities.

The Corner bass trap is the latest in low frequency absorption. This elegant panel integrates a tuneable membrane over a sealed volume, containing a high performance acoustic core. A secondary compartment positions Helmholtz resonators in the high pressure zone of the room. The panel is completely tuneable, by means of an adjustable weighted membrane, allowing to pin-point the performance of the panel to a target frequency.

The panels' tuneable membrane works in a similar way to a speaker cone, allowing for a much superior - and controlled - performance. A central mass is supported by an elastic membrane - This mass can then be altered to change the resonant frequency of the membrane, stepping the peak performance of the Trap from 57 to 82 Hz.
